

Code Theme

Document-wide Pygments theme, manual numbering

By Test User

Table of contents

1. Document-wide theme

2. Per-block override

List of code blocks

Code block 1.1: Python under the monokai theme

Code block 2.1: This block overrides the document theme

1. Document-wide theme

With `code_theme: monokai`, every code block uses that Pygments palette unless a block overrides it with `<!-- code-theme: -->`. Try other names like `dracula`, `nord`, or `solarized-light`.

With `numbering: false`, sections are **not** auto-numbered, so the numbers here (1., 2. ...) are written by hand.

```
def quicksort(xs):  
    if len(xs) <= 1:  
        return xs  
    pivot = xs[len(xs) // 2]  
    lo = [x for x in xs if x < pivot]  
    hi = [x for x in xs if x > pivot]  
    return quicksort(lo) + [pivot] + quicksort(hi)
```

Code block 1.1: Python under the monokai theme

2. Per-block override

```
uv sync  
md-to-pdf report.md
```

Code block 2.1: This block overrides the document theme
