

Theme Config Test

Most settings loaded from sample.theme

By Theme Default Author

Table of contents

1. Theme file

1.1 Larger headings and body

List of tables

Table 1.1: Table rendered at the theme's table_size

List of code blocks

Code block 1.1: Highlighted with the front-matter override
(monokai)

1. Theme file

This document sets only `theme: sample.theme`, plus a `code_theme: monokai` override. Everything else — `locale`, `author`, `page_size`, `margins`, `toc_depth`, and the font sizes — comes from `sample.theme`.

Precedence is `DEFAULT_META < .theme < front matter`, so `code_theme: monokai` here wins over the theme's `nord`, while `author: Theme Default Author` comes straight from the theme (this `.md` sets no author).

```
def main():
    print("theme override works")
```

Code block 1.1: Highlighted with the front-matter override (monokai)

1.1 Larger headings and body

The `text_size`, `title_size`, `h2_size`, and `table_size` from the theme apply throughout, with no per-document tuning.

Source	Setting	Where it came from
<code>.theme</code>	<code>code_theme</code>	overridden here
front matter	<code>code_theme</code>	wins (monokai)

Table 1.1: Table rendered at the theme's `table_size`
