

Locale Test Document

English rendering check

June 2026

By Test User

Table of contents

1. Introduction

1.1 Code block kept with its text

2. Second section

3. References

List of figures

Figure 1.1: A snowy mountain at dawn

Figure 2.1: An aerial view of a forest

List of tables

Table 1.1: Sample configuration values

List of code blocks

Code block 1.1: Minimal greeting function

1. Introduction

This short document verifies the **English locale** and a few features at once: asset labels should read "Figure", "Table" and "Code block", and the automatic index titles should be in English. It also uses an arbitrary cover image via the `logo:` field instead of an auto-detected logo file.

Figure 1.1: A snowy mountain at dawn

Name	Type	Default
<code>margin</code>	<code>float</code>	<code>1.15</code>
<code>font</code>	<code>string</code>	<code>Source Serif 4</code>
<code>size</code>	<code>int</code>	<code>14</code>

Table 1.1: Sample configuration values

1.1 Code block kept with its text

The `<!-- keep -->` marker forces the block below to stay on the same page as this paragraph:

```
def greet(name):  
    return f"Hello, {name}!"
```

Code block 1.1: Minimal greeting function

2. Second section

Figure and table counters reset on each section, so the first figure here is labelled **Figure 2.1**.

Citations use `[akey]` and link to the auto-generated **References** section. A single citation ([Brown, 2018](#)) and a grouped one ([Smith & Doe, 2020](#); [Brown, 2018](#)) render author-year markers, since this document sets `citation_style: author-year`.

Figure 2.1: An aerial view of a forest
